

Canister Packaging

Canistered anodes are primarily designed for special applications such as wet, marshy areas or soil conditions where caving is likely to occur. Benefits such as reduced installation costs and convenience of handling make the canister attractive for standard applications also.

Nominal weights for three different petroleum coke backfill densities are provided below. Weights do not include anode weight.

Item #	Size	Weight with 56# per cu Carbo 400	Weight with 60# per cu Carbo 60	Weight with 74# per cu Petroleum Coke
CP4x84	4x84 in	34 lb	37 lb	45 lb
